**Agro advisory based on advices received from the experts of
Agromet Advisory Committee**

Crop	Stage	Agromet Advisory
Ginger	Sowing	Prepare fields for sowing. Select disease free rhizome, dip treatment with a mixture of Dithane M-45 (0.25%) + Bavistin (0.1%) for 60 minutes, and using Trichoderma harizianum (1kg in 25 kg FYM/ha) as soil treatment in furrows.
Onion, Garlic	Bulb formation	Application of <i>Trichoderma viride</i> (biofungicide) inhibit growth of the pathogen. Mulching should be done.
Potato (Rainfed)	Vegetative growth	Earthing- up and weeding of potato fields are done as soon as weeds emerge, but preferably when potato plants are about 8–10 cm high. Mulching can be done for suppress the weeds and moisture preservation.
Tomatoes, Chilli Capsicum, Brinjal, and cucurbitaceous crops	Seedling	Life saving irrigation. Staking newly transplanted seedlings. Mulching may be done with crop residues; this will suppress the weed growth besides conserving moisture.
Wheat, Barley, Mustard (Valley)	Grain filling/ Maturity	Give light irrigation as per requirement. Remove weeds from outside of the bunds.
Wheat, Barley (High altitude)	Flowering/ Milking	
Barnyard millet, pigeon pea, (Mid to high altitude)	Germination/ Emergence	First weeding should be done after 2-3 weeks of emergence.
Peach, Apricot, Plum, Walnut	Fruit setting/Fruit development	Infestation of Leaf curl is observed in field. Spray of suitable insecticide followed by fungicide and antibiotic (Streptocyclin) can be done. Spray can be delayed under rainfall situation.
Apple	Flowering/Fruit setting	Scrap dead bark and lichen from trees with bark scrappers and white wash fruit trees. Mulching may be done with crop residues. This will suppress the weed growth besides conserving moisture.
Sericulture	2-3 year old plants	Removal of side branches. Removal of weeds around tree base.
Mushroom	-	Doors and window should be closed properly. Maintain humidity in crop room.
Animal Husbandry	-	FMD vaccination should be given to cow and buffaloes.
